Asynchro Tilt allows you to
move seat and back to any
position - Seat Height –
Height Adj Arms
£210

Key considerations

Tilt Action	Back Support	Arm type	Seat movement	Usage
We have products to suit all tilt action requirements, starting at a basic PCB through to luxury Premium actions. Which type of action is suitable for your user?	Be sure to consider the level of back support the user will require. The benefit of having an adjustable back height or inflatable lumbar support could be key to the comfort of the user.	Many chairs have fixed or height adjustable arms supplied as standard. Where arm type can be chosen, make sure you select the arms that best suits the user.	Does your user need to set their seat in vertical and horizontal position?	How many hours a day will the chair be in use? If its more than standard office hours maybe a heavy duty, 24 hour product should be considered
